1. **Introduction**

Health-care providers will not always find an easily accessible list of their patients' health-care preferences (e.g., online or through a health-care portal). Therefore, it is important to make sure that the information is available in a format that is accessible to all patients. For example, a patient may not have access to a computer or the Internet, or may not be able to read or write. Therefore, it is important to make sure that the information is available in a format that is accessible to all patients.
